

### Benefits

- Near zero emissions meet or exceed the strictest regulatory standards while providing greater product collection
- Excellent dust release characteristics
- Increased bag life
- Less frequent cleaning required
- Reduced pressure drop results in energy savings
- Lower maintenance costs lead to increased profitability

### Laminated Surface Treatments

**PTFE Membrane:** Increase filtration performance and efficiency with the PTFE membrane laminate. Acting as dust cake requiring no pre-coat before or during operation, the PTFE membrane preserves the filter substrates integrity while maintaining optimum airflow at a reduced pressure drop. Thermally stable up to 550° F (287°C) its applications include baghouses, dust collection and air pollution control devices and is available for pulse-jet, plenum pulse, reverse air and shaker bags.
