

Our multi-pleated filter elements have been specifically designed for pulse jet collectors. The multi-pleated filter element is designed to allow greater gas flow and has more surface filtration area than standard filter bags of the same length. In some applications this filter can handle up to 35% more volume.

Filterfab offers the multi-pleat filter in several fabrics at this time but is constantly developing new materials to continue the improvement of the product and meet the industries individual requirements.

#### Features

- High collection efficiency
- Up to 35% volume
- Increased surface filtration
- Low maintenance
- Customized pleat counts
- Customized lengths and diameters
- Higher temperature components
