

Located in the heart of the Canadian aluminum refining industry, the Filterfab Quebec facility has been equipped with the latest hi-tech equipment necessary to manufacture Vibrair™ filter bags.

Computerized cutting and sewing machines are used to manufacture high quality precision Vibrair™ filter bags eliminating the frequent inconsistencies found in standard manual manufacturing.

Technical expertise combined with specialized manufacturing knowledge, enables Filterfab to produce the highest quality product with precise dimensions and reduced tolerances. Our manufacturing of Vibrair™ filter bags is unparalleled anywhere else in the world. A wide variety of Vibrair™ filter bags can be produced meeting specific application requirements. From 9 to 32 pockets and customized lengths are available with either closed end or open end construction.
